

```
package junit5spec;

import org.junit.Before;
import org.junit.Test;

public class UnfilteredRandomTest extends RandomWithParityTest {

    @Override
    @Before
    public void setUp() {
        this.p = new UnfilteredRandom();
    }

    /**
     * This method is just a dummy place holder that has no testing
     * functionality. It is here just to keep Eclipse and JUnit 4, when used
     * with inheritance happy. Without some test method in the derived class,
     * Eclipse seems to think that there aren't ANY test methods!
     */
    @Test
    public void emptyTriggerMethod() {
        // no body
    }
}
```
